

Repositioning the Hemodynamically Unstable “Do Not Turn” Patient

- 🕒 Even if patient cannot tolerate a full turn, most patients can still be turned to a lower angle (micro-turn)
- 🕒 Reposition the head and limbs, consider passive ROM hourly
- 🕒 Almost all patients can still have their heels floated. If this is impossible, apply Mepilex heel dressing (#189956) until able to use offloading boots or pillow
- 🕒 Please note: A Bedrest order is not the same thing as a Do Not Turn order
- 🕒 Be aware of all lines and devices attached to patient, ensure none are under the patient (swipe for debris)
- 🕒 Use a Mepilex dressing or fluidized positioner pillow (Z-Flow), to cushion or offload
- 🕒 When attempting to resume turning, begin slowly, small serial turns

Orders:

Restrictions: Do not turn

Order sentences for: Restrictions

(None)

T;N, Do not allow patient to turn to operative side

T;N, Do not shave chest hair

T;N, Keep head of bed flat

T;N, No smoking privileges
